Precipitation probability					
80%	50%	50%	50%	50%	50%

Forecast for Thursday 11 Mar 2021

Weather:. During the morning there will be a few bright spells particularly for more easterly ranges but frequent blustery showers will turn increasingly more wintery to lower levels and bring a risk of thunder to western ranges. By lunchtime any showers above 400m will be of snow. A few centimetres of snow can be expected to accumulate and more for the munro tops especially in the west. Accompanied by strong winds blizzards will be a hazard at times.

Chance of cloud free mountain/hill tops above 800m: 30% or less, extensive low cloud associated with snow showers, perhaps more chance in the east where showers will be less frequent.

Visibility: Generally moderate or poor visibility but becoming very poor over western ranges at times in heavier snow showers or blizzards when whiteout conditions may take place. Cloud bases will generally be overcast in the west from 400m upwards, in the east there will be some cloud breaks but bases will generally be broken above 600m. Perhaps some brightness around more eastern ranges hill tops which will be more sheltered in these conditions.

Met Office Aberdeen Meteorologist's View

Snow level falling during the day with snow falling to 400m by mid morning, gusts may be 10mph stronger on the than forecast in heavy showers with whiteout conditions at times. Severe wind chill is likely during the day too. Extreme winter conditions on the mountains.

Forecast for Friday 12 Mar 2021

Weather: Snow showers will continue overnight, these will group together at times to be heavy and persistent at times but there will also be some clear spells especially for more eastern ranges. During the morning there will be a few bright spells but also more blustery snow showers will continue, snow falling to around 300m. A few centimetres of snow can be expected to accumulate and more for the munro tops especially in the west. Accompanied by strong winds, blizzards will continue to be a hazard at times. Showers easing in the evening and some clear spells and a sharp frost are expected overnight.

Maximum wind: Southwesterly winds 30-35mph gusting 45-50mph easing gradually in the afternoon.

Chance of cloud free mountain/hill tops above 800m: 30-40%, some cloud breaks will be found in the east, in the west low cloud will be broken at times.

Visibility: Visibility will be moderate or good. In the west conditions will deteriorate poor or very poor in snow showers at times, with cloud bases broken from 5-600m upwards at times, cloud is likely to break more in the afternoon. In the east there will be scattered cloud between 6-800m but the tops will be clear at times, especially around the more northerly hills.

Temperature: **Glens:** Plus 1 rising to 5 Celsius.
At 800m: Minus 4 Celsius.
Freezing level: 400m
